A few screen shots of the "Force Plot" (Fx) screen in Ergware v0.6. It shows a time profile of the force applied at every stroke (a new profile each stroke) as well as the max force (in kg-f) at the top. It also shows other things like stroke count (so you know it is working), strokes-per-minute, Power output and 500m split time.

Lots of things are adjustable in software, obviously, like the height of the profile, its reach across the screen, etc … Something to dial in over time as I use it.
